

Prefabricated Gadgets

These are all gadgets you can build before camp, possibly at your Patrol Meetings during winter.

This Patrol Box opens up to become a table and two benches.

Legs of one stool fit inside legs of other, and are bolted together through lower end of box.

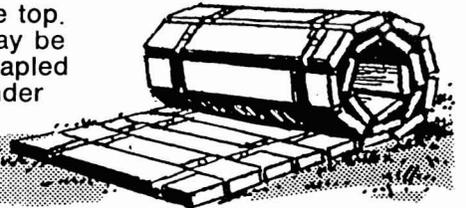

The table in use.

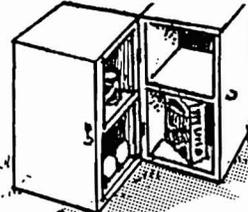

The measurements are for guidance only, and you should vary them to suit your own needs.

The box closed.

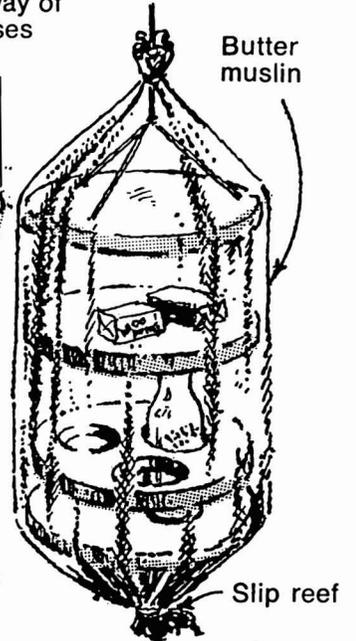

Instant table top. Webbing may be tacked or stapled over and under alternately.

Shelf-box. Another way of utilising packing cases in camp.

Hanging larder. Tie stopper knots beneath shelves. Hang in a shady place. To open, untie slip reef and lift muslin.

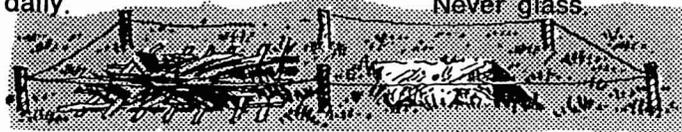

Garden canes are a useful but cheap medium for camp gadget-making.

Waste Disposal

Traditional wet and dry pits

Grease-trap—strong cover of interlaced sticks and filter of grass, renewed daily.

Only thoroughly washed or burnt material in here. Never glass.

With the increasing demand on camp sites, the traditional dry pit is giving way to sacks or plastic bags in which washed or flattened tins may be stored until they can be taken home or to a convenient refuse dump.

Oil-can filter is easy to make and to maintain.

Empty Tin Cans

Old style—Burn 'em, Bash 'em, and Bury 'em!

New Style—CLEAN 'EM

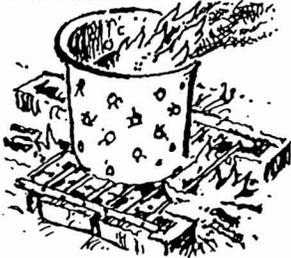

CRUSH 'EM

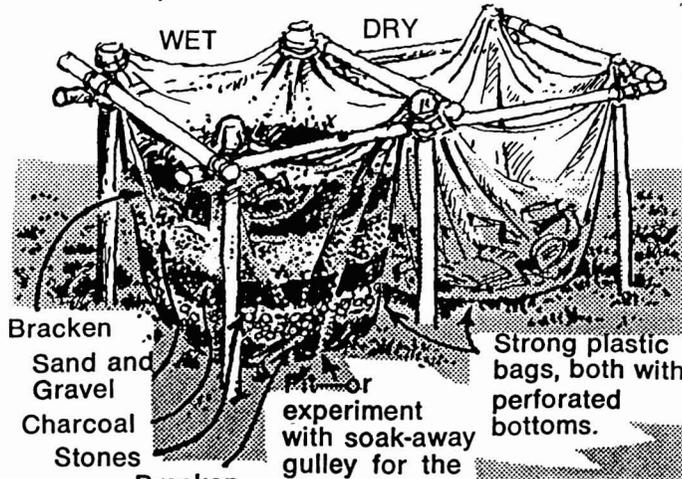

AND CARRY 'EM HOME!

Ask landowner when you arrive what he will want done with rubbish.

Incinerator—a can with holes in, over fire. To punch holes, fill can with earth, use six inch nail or marline spike.

Bracken
Sand and Gravel
Charcoal
Stones

or experiment with soak-away gully for the

Strong plastic bags, both with perforated bottoms.
